The new "Wavy Line" system of the ABUS subsidiary Schließanlagen GmbH Pfaffenhain

Wetter/Ruhr. The ABUS subsidiary presents an innovation – patented reversible key system with a waved code line WL14 – a system with increased handling and copy protection.

The *Wavy Line* series provides easy handling with its waved code line of the key. The patented element combined with a special stop pin inside the core offers increased protection. This technical innovation gives increased protection against copying and manipulation, effectively guaranteed thanks to an additional lateral dimple in the second row of pins.

The cylinder has a convincing eye-catching optical effect, combined with the waved code line key gives an attractive price-performance ratio.

Wavy Line is available as a single locking and semi-assembled profile key system for specialised distributors. ABUS-Pfaffenhain general system advantages are:

14mm increased core diameter, standard drilling protection, nickel silver keys and pins for less wear and tear.

All the Pfaffenhain systems and the new WL14 Cylinders are manufactured according to DIN EN 1303 and DIN 18252.

The ABUS subsidiary Schließanlagen GmbH Pfaffenhain is a worldwide locking systems specialist. The cylinders are exclusively manufactured in Pfaffenhain. The 7-stars hotel „Burj Al Arab“ in Dubai, the “Emirates Palace” in Abu Dhabi and the Humboldt-University in Berlin, among others, feature Pfaffenhain cylinder systems.
